

## **The Bright Ideas Challenge.**

### **What information were the videos trying to get across?**

I think the videos were trying to let children and teenagers know that they are the future and can have a big impact on how the world is in the future. A big problem that will get worse in the future is global warming, and fuel ( energy for cars and other transport ), contributes greatly to that. We need to find new ways of creating cleaner energy for the world. Technology will also be a big part of that as there could be new technology created that run on a renewable or cleaner energy source.

### **How important do you think the videos are?**

I think the videos are important because it teaches children, even those who don't want to take part in the challenge, about important problems of the future and how they can make their world and life a better place.

### **What new information did you learn?**

I learnt more about the current problems with climate change and the impact that will have on the world in the future especially in cities and what teenagers and young adults can do to help as its their future.

### **Will it make you consider entering the competition next year? Please explain your answer to this question.**

I will consider entering the competition next year because I think it's good that we find new sources of energy and prevent global warming from making a big negative impact on our lives.
